Medina-Acosta B. R., Rassell D.G.;

Structurally distinct genes for the surface protease of Leishmania mexicana are developmentally regulated.";

Mol. Biochem. Parasitol. 57:31-46(1933).

1. FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

1. CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl and Pl' and basic residues at P2 and P3'. A model nonapeptide is pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at Ala-Tyr-1-Lu-Lys-Lys-.

2. COFACTOR: Bands 1 zinc ion per submuit (By similarity).

2. DEVELOPMENTAL STAGE: Expressed in both the promastigote and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. "Three distinct RNAs for the surface protease gp63 are differentially expressed during development of Leishmania donovani chagasi

"Three distinct RNAs for the Surface protease gp63 are differentially promastigores to an infectious form.";

"Deal Chem. 267:1888-1895(1992)."

"FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

"CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl and Pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at Ala Tyr-|-Leu-Lys-Lys-

"COFACTOR: Binds 1 zinc ion per subunit (By similarity).

"SUBSCELLULAR LOCATION: Actached to the membrane by a GP1-anchor.

"STMILARITY: Belongs to peptidase family M8.

## ALIGNMENTS

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal. The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use. of thin aggregative fimbriae (SE17/TAF) nucleation depended assembly system of strains of Salmonella. Bscherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA. CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene are combinant gene back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the back into the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromosome of the chromesome of the chromosome of the chromosome of the chromosome of t Salmoneila; agfA; chromosomal gene replacement; fimbrin; epitope; vaccine; immune response; immunogen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     \delta
compy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein contraining a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogens the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and incompantation of the present invention
                                                                                                                                                                                                                                                                                                                                                                     ô

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbriae (SEPI)/TAF) nucleation depended a seembly system of strains of Salmonella, Escherichia coli and addeding Entering recombinant of a recombinant gene into the chromosome of the homologue fimbria subunits, respectively; (2) directing recombinant on a recombinant gene into the chromosome of the homologus species; (3) directing recombinant on of a recombinant gene comprising separating a namino acid polymer comprising a recombinant gene comprising separating a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or containing a naminal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a finbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein sequence is given in munogens, which may be important for directing an immune response in an animal response in an animal response in an animal in conjunctine relevant to an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNAT-----YDQLVTRVVT 112

cc thin aggregative finbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella Escherichia coli and cc Enterobacteriacae for the production of finbriae comprising recombinant companies. The production of separating recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a comprising separating a namino acid polymer comprising separating an amino acid polymer comprising separating an amino acid polymer comprising separating an amino acid polymer comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E coli or an introducing the carrier of introducing the correspondence or segments of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant protein possesses both the correspondencity and adhesion properties relevant for an efficient live vaccine, the carrier finbrial submit proteins are usually strong immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier finbrial submit proteins are usually strong immunogenicity which may be important for directing an immune response consequence is given in the exemplification of the present invention present sequence is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SDARKSETTITQSGYGNGADVGQGADNSŢIELTQNGFRNNAŢYDQLVTRVVTHEMAHAĞG 120

                                                                                                                                                                               The present sequence represents agfA encoded by the full agfA gene derived from Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEPI)/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and aggregative fimbriae (SEPI)/TAF) nucleation depended sesembly system of strains of Salmonella, Escherichia coli and addition of a recombinant coli and addition of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene comprising species, replacing the native back into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a replacement segment or segments of foreign animal, conjunction of a selection which is useful for sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (T) is useful for the expression of recombinant host cell and introducing the cliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein ser usually strong immunogens, which may be important for directing an immune response in an animal conjunction are usually strong aminunogens, which may be important for directing an immune response in in animal in conjunction in the exemplification of the present invention in manner is given in the exemplification of the present invention response is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNAT-------YDQ 105

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbried (SETHY)TAP) nucleation depended assembly system of strains of Salmonella, Escherichia coli and strenchardereriaceae for the production of fimbriae comprising recombinant of directing recombination of a recombination of a recombinant gene (Enchoracions species, (3)) directing recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or copy where into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for the expression of recombinant for an efficient live vaccine, the carrier fibbrial subunit protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the enrier fimbrial subunit for directing an immune response in an animal. The administrated are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogens, which may be importent for directing an immunogens, and properties relevant for an efficient live immunofens, the inserted epitope, and properties relevant seasy and in the properties of an efficient live inserted epitope, and properties relevant seasy and intention in the properties are presented in seasy and intention in the properties are presented in seasy and intention in the properties are presented in seasons.
                                                                                                                                                                                                                                                              Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEP1/TAP) nucleation depended assembly system of strains of Salmonella Escherichia coli and considerate and sequences for the production of fimbriae comprising recombinant of a recombination of a recombinant gene into the chromosome of the compositions of a recombinant gene copy of that gene; and (4) eliciting an immune response in an animal, copy of that gene; and (4) eliciting an immune response in an animal, comprising separating a namino acid polymer comprising a replacement segment or segments of foreign amino comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or cuseful for the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant AgfA protein minemer response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response consequence is given in exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SDARKSETTITOSGYGNGADVGQGADNSTIELTQNGFRNNATYDQLVTRVVTHEMAHA-- 118

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are:

(1) use of thin aggregative fimbriae (SEPI7/TAP) mucleation depended assembly system of strains of Salmonella Escherichia coli and CE netwobacteriaceae for the production of fimbriae comprising recombinant CC directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an ammon acid polymer response in an animal, compy of that gene; and (4) eliciting an immune response in an animal, protein containing a replacement segment or segments of foreign amino acid polymer comprising separating an amino acid polymer comprising asparating an amino acid polymer comprising asparating an inconjunction with a carrier of foreign amino acid polymer comprising are passented or sequences grown on a Salmonella, E. coli or Enterobacterizaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or dilutent. (I) is useful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbria protein proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEPI)/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coll and assembly system of strains of Salmonella, Escherichia coll and directing recombination of Imbriae comprising recombinant of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant of a recombinant gene copy of that gene, and (4) eliciting an immune response in an animal, comprising separating a replacement segment or segments of foreign amino comprising separating an amino acid polywer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino cut sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is cusful for the expression of recombinant AgfA protein much expression of recombinant portein or system the heterologous antigens are presented in high numbers (up to coli of munume response in an animal. In a finibrial presentation system the carrier finbrial subunit proteins are usually strong immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier finbrial subunit proteins are usually strong capinope, which may be important for directing an immune response capinope, and hybrid finbriae are easy and inexpensive to purify in large amount. The present sequence is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to $500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are:

assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant of fimbriae comprising recombinant of directing recombination of a recombinant gene comprising species, (3) directing recombinant gene into the chromosome of the homologous species, replacing the native comprising species, (3) directing an immune response in an animal, back into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or acid sequence an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the racriter fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response immunogens, which may be important for directing an immune response immunogens the exemplification of the present invention

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment with the encodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative fimbries (BER17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and directing recombination of fimbries comprising recombinant of directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene copy of that gene; and (4) eliciting an immune response in an animal; comprising sperarating an amino acid polymer comprising a replacement segment comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or collymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid finbrin protein possesses both the immunogenicity and adhesion preperties relevant for a efficient live in the contraction of the contraction and efficient live formation and efficient live in an efficient live.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATYDQLVTRVVTHEMAHAGG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

The invention relates to an isolated peptide capable of binding a mammalian plasma protein or of generating an immune response in a mammal selected from sequences shown in ABR82642, ABR82648-49. The peptide or antibody is useful for treating a bacterial infection in a human or animal or in the manufacture of a medicament for the prophylactic treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigella infection. The peptide that is immobilized on a solid support is also useful as a reagent for determining the ability of a plasma protein to bind to bacteria. The present sequence represents an E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SDARKSETTITOSGYGNGADVGQGADNSTIELTONGFRNNATYDOLVTRVVTHEMAHAGG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated peptide capable of binding a mammalian plasma protein, useful in the manufacture of a medicament for the prevention and/or treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigella infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MKLLKVAAFAAI VVSGSALAGVVPQWGGGGNHNGGGNSSGPDSTLSI YQYGSANAALALQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              જે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are:

(I) use of thin aggregative fimbrise (SETI/TAR) nucleation depended assembly system of strains of Salmonella. Escherichia coli and Enterobacteriaceae for the production of fimbrise comprising recombinant of Agra, CspA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising are amino acid polymer comprising are mino acid polymer comprising an amino acid polymer comprising an amino acid polymer comprising an amino acid polymer comprising an amino acid polymer comprising amino acid colymer coll and inroducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the animal in conjunction with a carrier or diluent. (I) is useful for the animal in an animal. In a finhalfal presentation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                 Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATYDQLVTRVVTHEMAHAGG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogencity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

US-09-540-236-2676
Sequence 2675, Application US/09540236
Patent No. 6672910
GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATAF;
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: 100-2005-001
TITLE OF INVENTION: 100-2005-001
CURRENT APPLICATION NUMBER: US/09/540,236
CURRENT FILING DATE: 2000-04-04
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 7549, Application US/09489039A
